NORTH

The waterline easement would need to be extended onto these properties to provide service as desired.

The proposed waterline easement across Town property would terminate at this property line in this approximate location.

Existing 30' OWASA sewer easement in red.

Approximate location of the proposed waterline easement across Town property as shown in blue

The steep grades and large trees in the yellow area, make a waterline crossing here problematic; especially since the Town lot is within the FEMA floodplain. This area should not be disturbed.
